

AgriSource Alfalfa

LONGHORN DT

Longhorn DT is a persistent, drought tolerant alfalfa. These genetics trace back to the Ladak variety, but with superior forage yield. Longhorn DT works best for non-irrigated rangeland pastures from the northern plains to the winter hardy intermountain areas of the west.

Key Features

- Drought Tolerance
- Very Persistent
- Exceptional Disease Resistance Package

Agronomic Characteristics

Bacterial Wilt	HR
Fusarium Wilt	HR
Verticillium Wilt	MR
Anthrachnose	HR
Phytophthora RR	HR
Aphanomyces RR (1)	MR
Stem Nematode	R
N. Root Knot Nematode	HR
Fall Dormancy	2
Winter Survival	2
Saline Soils	Tolerant
Recovery after Harvest	Slow
Root Type	Tap
Forage Yield	Very Good
Forage Quality	Very Good
